Nvidia agreed to pay 12.93 billion dollars for Hugging Face this week. Last year the same company turned down 500 million dollars from the same buyer.

An appraiser can price a house in an afternoon. She pulls three comparable sales, hands you a number before dinner, and...

The most important AI story last week was not a model. It was a fence.

Nvidia reportedly agreed to pay \$12.9 billion for Hugging Face, the town square where developers find and share open models. A federal judge told the Pentagon it cannot punish Anthropic...

We declared computer vision better than humans. We were maybe halfway there.

Ten or fifteen years ago, models beat people at naming objects. A lot of the human misses were dog breeds. The headline said computer vision had passed human vision. It took years after that to get close to the real thing.

On Tuesday the web quietly changes its mind about who reads it for free.

On September 15 Cloudflare sets new defaults for AI crawlers. For every new domain that onboards from that day, bots classified as Training or Agent are blocked on the pages that display ads. Search stays allowed. Any owner can opt out before Tuesday with one setting.

Accepted 1.2K

Replied 234

Remaining 5.6K

Highest-value next move

Turn the strongest verified engagement into the next conversation, meeting, or measurable outcome.

PRIORITY

Start with warm leads and active conversations that already show intent.

01

234 outreach replies are the conversion opportunity. Open the warmest robotics conversations in BAMF, use AI assistance to prepare the next response, and move each qualified lead toward a meeting or explicit next step.

02

Define the Thoth robotics ICP as an auditable company-and-role filter.

03

Join each new contact to a qualifying robotics company before it enters the North Star count.

02 / PERFORMANCE

Outreach is producing conversations. Prioritize the best robotics opportunities now.

Campaign, content, and North Star evidence are organized once here; unavailable inputs remain unavailable rather than becoming zero.

OUTREACH NEW CONNECTIONS

1,175

● Observed · Campaign performance

All accepted campaign connections.

OUTREACH REPLIES

OUTREACH NEW CONNECTIONS

1,175

● Observed · Campaign performance

All accepted campaign connections.

01 1175 accepted connections and 234 replies create a strong all-time outreach base. 542 campaign contacts match the robotics ICP signal; named active conversations are the immediate opportunity.

FOCUS

What needs focus

Which active robotics conversations should Pedro advance now, and which winning content themes should create the next wave?

ROBOTICS ICP-FIT CAMPAIGN PROSPECTS

Campaign contacts whose company, role, or headline matches the current robotics ICP signal.

01

Advance the strongest robotics conversations already in motion before expanding volume.

02

Reuse the top-performing robotics and AI content themes to attract the next wave of qualified prospects.

30 / 60 / 90 days

Each horizon retains any supplied evidence state and source; missing horizons use the legacy operating plan as an explicit fallback.

TEMPLATE

Signal Ledger

01

30 days · Approve the Thoth company-and-role ICP policy, review every replied robotics match, and freeze the current deterministic cohort as baseline.

02

60 days · Run one role-specific robotics sequence and one content theme derived from reply evidence; compare fit-to-reply movement against the frozen cohort.

03

90 days · Promote the winning robotics segments into a recurring BAMF agent report and governed outreach playbook with explicit inclusion and exclusion rules.

Campaign momentum

Exact source values are shown on a labeled log scale so large inventory and small conversion stages remain legible without changing the underlying counts.

Campaign momentum

Observed values · exact values · Campaign performance and robotics ICP

Official campaign outreach funnel

Funnel stages · exact values · BAMF Connect campaign snapshots

- 01 Campaign momentum: 3 chart-ready points (derived · Campaign performance and robotics ICP). Campaign connections, replies, and robotics-fit prospects.
- 02 Official campaign outreach funnel: 4 chart-ready points (observed · BAMF Connect campaign snapshots). Latest official campaign leads/contacts, contacted, accepted connections, and total replies; this is a funnel snapshot, not a period trend.

SOURCES

Sources

Source coverage, freshness, and applicable window for this report.

- 01
- Profile-visitor history is omitted until the governed LinkedIn visitor source is connected.
- 02
- Booked calls, captured emails, and downloads are omitted until the site or calendar conversion source is connected.

SOURCES

What this report is based on.

	LinkedIn network connections OBSERVED Current connected LinkedIn network size. This is reported separately from campaign contacts and outreach-derived leads. Observed · 2026-09-18 Next: Use this only as the broad network baseline; do not compare ICP-fit outreach results against total network size.		BAMF Connect campaign snapshots OBSERVED Latest official campaign counters from the governed provider refresh. Observed · 2026-09-18 Next: Capture a comparable baseline before claiming a period delta.
	BAMF.ai LinkedIn analytics OBSERVED Creator-scoped authoritative LinkedIn summary and post metrics. Observed · 2026-09-18 Next: Refresh the creator analytics source when stale.		LinkedIn aggregate demographics UNAVAILABLE Aggregate demographic categories only; no identities or profile-level records are projected. Unavailable Next: Refresh the current aggregate observation before interpreting audience shape.
	BAMF Connect reconciliation OBSERVED Current checkpoint status: idle. Observed · 2026-09-18 Next: Keep the bounded reconciliation cadence healthy.		Robotics ICP classification OBSERVED Company, title, or headline contains an explicit robotics, autonomous systems, industrial automation, mechatronics, machine vision, humanoid, cobot, unmanned systems, or drone signal. Observed · 2026-09-18 Next: Approve a narrower Thoth company-and-role policy to promote provisional matches into verified-fit records.
	Figure AI post-engager cohort OBSERVED Robotics-adjacent campaign cohort used as a second candidate signal. Observed · 2026-09-18 Next: Review overlap with the deterministic robotics classification.
